High-Strength Steel Construction provides strength and durability

Swivel Casters for easy mobility

The Ranger “Low Rider” Floor Jack Effortlessly Lifts 3 Tons

The RFJ-6HD 3-Ton “Low Rider” Garage Floor Jack is a true heavy lifter. With a 3-ton lifting capacity, quick-pump design, durable heavy steel construction and emergency overload system for increased safety, the RFJ-6HD is the jack to wheel out when working under a hefty ground-hugger. With a raised height of 21”, you’ll see and feel the difference between a Ranger floor jack and... well, anything else!

While many jack stands are capable of raising vehicles over 20”, many floor jacks fall short of this height. It’s disappointing to get a nice jack stand that you can’t get the most out of because of limitations from the floor jack. The RFJ-6HD gets more out of your equipment by offering an increased lifting height that doesn’t compromise your safety.

Features

- Low-Profile Chassis
- “Quick-Pump” feature for faster lifting speeds
- Swivel casters for easy mobility
- Built-in safety overload system
- Designed for heavy use
- Heavy steel construction
- Flanged side plates provide
- Increased strength
