Power and Height in a Rugged Transmission Jack

Built with the same heavy-duty materials as our larger models, the Ranger RTJ-1100 allows you to safely and easily remove, transfer and install transmissions, transaxles and other drive-train components weighing up to 1,100 lbs. The unit features a built-in safety overload valve for your protection and a foot-operated pump for hands free operation. All components are ruggedly built to ensure many years of simple service.

Small storage area? No problem! The 24-in. base makes this one of Ranger's most space-efficient designs. We know that even large garages and shops have a lot of equipment to lug around, so we're bent on making our [transmission jacks](#) as space-efficient as possible. Roll it anywhere for easy storage in seconds flat.

Features
