Don't Trust Your Engine's Care to Anything but Ranger

The engine is the heart and soul of a vehicle. Don't trust its care to anything but Ranger. If you're replacing or servicing engine mounts but don't want to hoist the entire engine to do so, save time and money with a superior-quality [engine support](#) beam. Professionals and DIY'ers both benefit from having an engine support hand for fast access to the engine.

The RST-500ES is designed for unparalleled adaptability: threaded adjustable chain hooks and telescoping side foot pads adjust to all manner of engine compartments. Wheel well to wheel well support provides a solid foundation for up to 1,500 lbs. of engine while you're working on the transmission or dropping a sub-frame. This engine support is both easy to use and saves real time, every time. And we all know that in this business, time means money.

Features

- Straddles inner fender wells to support engines
- Adjusts to fit all vehicles
- Precisely positions engine for easy gear box and transmission removal
- Perfect for 4 and 6 cylinder engines
- Rubber foot pads prevent damage and holds load securely
